

Epidemic Prevention & Work Resumption of WONDER

2020 has started in an unexpected way. In a short time, everyone in China becomes devoted to combating the “epidemic” and works together to make full use of every minute to fight the war. Up till now, the national epidemic prevention work has entered the critical stage. In the meantime, from mid-February, various enterprises have started to resume their work. In this special period, WONDER adheres to the principle of preventing the epidemic while resuming work at the same time.

On the one hand, we follow the instructions of provincial, municipal, and district government in epidemic prevention, to ensure the health of our employees. On the other hand, we spare no efforts to resume our production and other work, trying to eliminate the negative impact of the epidemic on our company’s operation and economy as much as possible.

WONDER has been praised by municipal and district governments for the measures we’ve taken. And CCTV News channel has also made a detailed introduction of the company’s measures.

Up till now, over 50% of our employees have returned to their posts, and it is expected that the production capacity will be fully resumed in early March. Lisong Precision Casting has resumed production smoothly in the early stage and it is one of the few companies in the industry to have resumed production capacity.

There will still be a tough time for epidemic prevention and control, and WONDER is ready to face the difficulties. On the premise of ensuring the safety of our employees' lives and health, we will put more efforts into leading WONDER to always advance on the road of high-quality development.

WONDER Highly-efficient Electric Motor Gains Korean IE3 Energy Efficiency Certification

At the beginning of the new year, WONDER obtained the first important certification-WONDER highly-efficient electric motor successfully passed Korean IE3 energy efficiency certification test.

Since 1979, the Korean government has carried out more than 100 end-user energy-saving activities. Among them, the most widespread and effective one is to use mandatory energy efficiency and label to encourage manufacturers to produce efficient products and provide consumers with the most efficient equipment and appliances. Thus, those lab test results that are approved by the Korean government can be used as the proof for manufacturers and importers to prove the energy efficiency level of their products to the Korean energy management organization.

WONDER obtaining this certification means that our highly-efficient electric motors will gain great help in exploring the markets in South Korea and East Asia. In the meantime, this will aid the company in optimizing our market structure and promoting the research and development of different types of products.

On this basis, WONDER will also actively promote the certification and sales of first-level energy-efficient motors (IE4) in the region. WONDER IE4 motor has obtained good word of mouth in various regions of the world owing to the stable and efficient operation quality and fast and effective after-sales service. And we firmly believe that WONDER IE4 motor is bound to receive customer recognition in the East Asian market.

WONDER IE3 electric motors

WONDER will also actively promote the certification and sales of first-level energy-efficient (IE4) motors in the region.
